RVR SQUARED FINANCIAL MANAGEMENT SYSTEM SOFTWARE EVALUATION QUESTIONNAIRE

Name (Optional): 1

Role (Required): ☐ Owner/Admin ☐ Finance ☒ Client

Instructions: The purpose of this survey is to gather your feedback on the effectiveness and usability of the Financial Management System for RVR Squared Mechanical Engineering Services. Your insights will help us assess the system's performance and identify areas for improvement.

For each statement, please indicate your level of agreement or disagreement using the following scale:

Scale: (4) Strongly Agree (3) Agree (2) Disagree (1) Strongly Disagree

Your responses will be confidential and will only be used for the purpose of this study. Thank you for your time and participation!

SOFTWARE QUALITY MODEL ADAPTED FROM ISO/ IEC 25010

Functional Usability- it refers to how easy and effective it is for someone to use a product or system to do what they need. It means the product works well, is simple to understand, and helps users finish tasks without problems.	4 SA	3 A	2 D	1 SD
The financial management system is suitable for a mechanical engineering company, helping manage project budgets and track material costs while keeping clients updated throughout the project cycle.	/			
The search and filter functions allow users to quickly find specific records, and the system ensures all finalized records are accurately linked to the appropriate entities.		/		
The system prevents users from submitting incomplete or incorrect data entries.	/			
The data visualization presented in the dashboard provides a clear and insightful view of the project's financial status and progress.		/		
The financial management system is easy to use for employees with varying levels of technical skills.	/

Interaction Capability- It refers to how well a user can communicate and work with a product or system. It means the system responds properly to the user's actions and allows smooth and clear interaction.	4 SA	3 A	2 D	1 SD
The system immediately notifies the user with a clear message when an error occurs, helping them understand and correct the mistake.	/			
The system has a simple and intuitive interface that requires minimal training for users to operate.		/		
Input fields are logically structured and easy to use.	/			
The system's interface clearly indicates which fields are mandatory and which are optional.	/			
The system provides immediate visual confirmation when an action has been carried out successfully.	/			
Performance Efficiency- It refers to how well a system or product works when doing tasks.	4 SA	3 A	2 D	1 SD
The system is capable of processing financial data and generating reports efficiently, even when managing multiple projects for the Admin and Finance side, while giving Clients a quick and easy experience when using the system.	/			
The system is responsive and capable of performing tasks without significant delays or slowdowns.			/	
The system automates calculations and report generation to produce financial statements that reduce manual effort and save time for admin and finance, while clients are automatically provided the account credentials once their record has been added in the system by RVR admin.	/			
The system quickly updates income statements, cash flow records, and journal entries when project-related changes are made. On the client side, client can easily see updates if the project status or progress changes.	/			
The system allows me to easily switch between different project details and reports using clearly labeled buttons for quick access	/

Reliability - It refers to how dependable a system or product is during use. It means the system works correctly without failing and can be trusted to perform well over time.	4 SA	3 A	2 D	1 SD
The financial management system builds trust and helps in data-driven decision-making for the Admin and Finance team by providing accurate reports, and ensures transparency for clients through clear and timely project updates.	✓			
The financial management system provides Admin and Finance with accurate financial data and efficient expense tracking, while Clients are provided with the corresponding PO number required for project confirmation via system and email notifications.	✓			
The system provides archiving options to securely store and restore records, while clients can review past progress updates and reports.	✓			
The system maintains the accuracy and consistency of information to ensure it remains dependable for decision-making.		✓		
The system reliably performs tasks, such as generating accurate reports and tracking records without errors, while ensuring Clients can reliably access their approved contracts and related records without disruption.	✓			
E. Security - It refers to how well a system or product protects data and users from harm or unauthorized access. It means keeping information safe and preventing risks like hacking or misuse.	4 SA	3 A	2 D	1 SD
The financial management system is secure in protecting data information from unauthorized access.	✓			
Both Admin and Finance are required to input their password before accessing financial statements, whereas Client/End Users are limited to a maximum of five (5) login attempts.	✓			
The system maintains a comprehensive activity log that records all user actions (e.g., logins, logouts, data creation, updates, and archiving). On the client side, users receive timely notifications and updates to track project progress effectively.		✓		
The system alerts users when there are repeated failed login attempts.	✓			
The system uses role-based access to prevent users from performing tasks outside their scope, reducing the likelihood of fraud, data tampering, or operational mistakes.	✓
